

Python + JavaScript Daily Learning Plan (4 Weeks)

This is a 4-week structured learning plan for mastering Python and JavaScript side by side, with daily tasks and a project-based weekend structure.

Week 1: Python & JS Foundations

Day	Python Focus	JavaScript Focus	Folder / Task
1	Print, Comments, Variables	Console.log, let/const	day01_variables/
2	Data Types (int, str, float)	Primitives (number, string)	day02_data_types/
3	String Operations	String Methods	day03_strings/
4	Numbers & Arithmetic	Math Operators	day04_arithmetic/
5	Comparison Operators	Comparison (==, !==)	day05_comparisons/
6	Review	Review	Practice & Bug Fix
7	Project	Bio Card CLI Project	day07_bio_card/

Week 2: Logic, Conditionals, Functions

Day	Python Focus	JavaScript Focus	Task / Folder
8	Nested if/else	Nested if/else	Login System
9	Boolean Logic	Boolean Logic	Voting Check
10	input(), type casting	prompt(), conversions	BMI Calculator
11	Built-in functions	Math, parseInt	Number Stats
12	Parameters + Return	Function Params & Return	Area Calculator
13	Review	Review	Revisit Topics
14	Project	Student Report Generator	day13_student_report/

Week 3: Loops, Lists, Iteration

Day	Python Focus	JavaScript Focus	Task / Folder
15	for loops	for, for...of loops	Sum 1-50
16	while loops	while loop	Guess Game
17	List basics	Arrays: push/pop	Name Manager
18	Looping through lists	Loop arrays	Even Numbers
19	break, continue	break, continue	Skip odds
20	Review	Review	Revise + Practice
21	Project	ATM Simulator	day19_atm_simulator/

Week 4: Dictionaries, Objects, Modules

| Day | Python Focus | JavaScript Focus | Task / Folder |
|-----|-----|-----|-----| 22 |
Dictionaries | Objects | Profile Info day20_dict_objects/ || 23 | Add/
Update Dict | Update Object | Inventory Tracker day21_dict_update/ || 24
| Nesting Dict/List | Nested Obj/Array | School DB day22_nesting/ || 25 |
Return Dict from Function | Return Object | User Creator
day23_return_dict/ || 26 | import, Modules | import, Modules | Random
Quote Generator day24_modules_intro/ || 27 | Review | Review | Refactor
Code || 28 | Project | Contact Book | day25_contact_book/ |

Folder Structure Example

```
python-js-daily-streak/ |— day01_variables/ | |— hello.py | |—  
hello.js |— day02_data_types/ | |— types.py | |— types.js ...  
|— day25_contact_book/ | |— contacts.py | |— contacts.js
```

How to Use This Plan

1. Dedicate **2 hours daily**: 1 hour for Python, 1 hour for JavaScript.
 2. Push your code to **GitHub every day** to maintain a streak.
 3. Use a **README.md** in your root folder to describe your journey.
 4. On weekends, revise and complete the **mini project**.
-

Sample README.md (in your GitHub repo)

```markdown

# Python + JavaScript Daily Streak

## Goal

Learn Python and JavaScript side by side in 4 weeks, with real project tasks and daily commits.

## Progress Tracker

- Week 1
- Week 2
- Week 3
- Week 4

# Folder Guide

Each folder (day01, day02, ...) contains both .py and .js versions of the daily task.

## Tips

- Commit every day to build consistency.
- Reflect with comments in your code.
- Ask for help when stuck!

## Let's Go!

...
